AI Response Validation Report

AI Hallucination Detection System — v2.0
Generated: 13 October 2026 at 12:20 PM

User Query

Explain photosynthesis and describe the roles of sunlight, water, and carbon dioxide in the process.

Overall Validation Result

Overall Quality Verdict	**Fail**
Weighted Overall Score	46/100
Relevance Score	15/100 (Off-topic)
Accuracy Score	20/100 (Incorrect)
Hallucination Risk	0% (No Hallucination)
Completeness Score	33/100 (Incomplete)
Supported / Unsupported Claims	0 Supported / 0 Unsupported
Contradictory / Uncertain Claims	0 Contradictory / 1 Uncertain
Processing Time	0 ms

Consolidated Evaluation Reasoning

Overall evaluation verdict is 'Fail' with a weighted reliability score of 46/100. Dimension Scores — Relevance: 15/100 (Off-topic), Accuracy: 20/100 (Incorrect), Hallucination Risk: 0% (No Hallucination), Completeness: 33/100 (Incomplete). Major issues identified: RELEVANCE: Response fails to address user prompt intent (15/100).; COMPLETENESS: 1 question requirement(s)/sub-question(s) omitted.; ACCURACY: High proportion of inaccurate or unverified statements (20/100).

Completeness Assessment (M3.1)

Status: Incomplete (33/100)

Reasoning: The response is substantially incomplete. Out of 3 requirement(s), it missed or failed to adequately answer 1 aspect(s).

Omitted / Missing Requirements:

- describe the roles of sunlight

Claim-Level Analysis

Claim #1	UNCERTAIN	68% confidence

Photosynthesis is a process used by plants.

Evidence:

> "Photosynthesis is the process by which plants use sunlight to convert water and carbon dioxide into glucose and oxygen."

Reasoning:

The reference context is partially related but does not conclusively verify this claim (confidence 68%). The semantic similarity is moderate. Additional trusted sources should be consulted before relying on this statement.
